

Mastic Asphalt

Mastic Asphalt

Forth Road Bridge, Scotland

approximate area 6000m²
approximate value £1.5m
specification Mastic Asphalt

The BriggsAmasco Commitment

Our mission is to carry out our Roofing and Cladding contracts, using the best and technically most appropriate products in order to give our customers the best value in accordance with their budgetary and performance requirements.

For 140 years **BriggsAmasco**, originally founded by William Briggs in Dundee, have been providing a service to the Waterproofing Industry, based on their technical expertise, contracting skills and customer service. Today **BriggsAmasco** are part of the international IKO Group who are one of the world leaders in waterproofing, with manufacturing plants in the USA, Canada and across Europe.

In the UK, the group companies manufacture and supply a complete range of Bituminous, Mastic Asphalt, Single Ply, Liquid Roofing and ancillary products to the roofing market, all of which are installed by BriggsAmasco. With 14 strategically located branches across the country, **BriggsAmasco** can truly supply a One Stop Shop for the most complex roofing projects.

● The BriggsAmasco Service

Each branch offers a total service to its locality - surveying, estimating, contract management, and has the support of technical design teams with CAD facilities. For larger contracts designated project management teams are established in order to ensure efficiency and co-ordination on site, and work with other interfacing contractors. The branch network ensures that **BriggsAmasco** can give a national roofing service backed with local knowledge and expertise. Each contract is supported by job specific method statements and risk assessments. **BriggsAmasco** are also competent to act as Principal Contractor if a contract comes under the scope of CDM, and as planning supervisor if required.

● Safety

BriggsAmasco operate a 'top down' safety policy ensuring that every employee is aware of their responsibilities for safety concerning both themselves and others. This philosophy is supported by a documented policy and by full-time qualified Safety Advisors, ensuring compliance with both company rules, and current legislation.

● Supply Chain

BriggsAmasco are proud to offer their services in partnership with only the premier roofing and cladding product manufacturers. We operate an effective commercial and technical appraisal system of all suppliers - 95% of product procurement is through partnership agreements.

● Insurance

BriggsAmasco, in order to give our clients total comfort, carry substantial insurance for third party and employers' liability, contractors all risk, and professional indemnity; insurance documents are available for inspection.

● Quality & Experience

Established in 1865 the company are one of the largest Roofing and Cladding contractors in the UK, with a mainly directly employed labour force. **BriggsAmasco** have expertise in both the Refurbishment and New Build Roof market places, carrying out over 2,000 projects yearly, from small refurbishment projects to multi-million pound contracts, supported by a dedicated technical department. **BriggsAmasco** have operated a Quality System since 1988 and are registered to ISO 9001 2000.

● Guarantees

BriggsAmasco offer guarantees on approved specifications normally under the aegis of the product manufacturer. Guarantees can cover design, materials and workmanship. Insurance backed guarantees are also available.

● Clients

BriggsAmasco's customers vary from single unit property owners, to major blue chip customers with multi site property portfolios, including major retailers, housing associations, facility management companies, local and national government agencies, educational bodies, health trusts and their professional advisers.

The most durable and traditional waterproofing solution

Mastic Asphalt is the traditional choice of specifiers as a waterproofing medium because it has a long and successful history in many different situations and applications.

The Material

The material is made up of graded aggregates bonded together in suitable bitumen, which when solid forms a dense, voidless impermeable mass, but when heated to the correct temperature is spread by a hand float. In the hands of a **BriggsAmasco** craftsman it can be used to waterproof not just large flat areas but the most intricate details.

The Advantages

1. Long Term Durability
2. Proven Performance
3. Seamless
4. Suitable for Heavy Trafficking
5. Not susceptible to Wind Uplift
6. Can be applied to Sloped, Vertical or Curved Surfaces
7. A.A Fire Rating

Polymer Modified Asphalt

This is a Mastic Asphalt which has been manufactured using a polymer modified bitumen. The product contains all the performance advantages of standard asphalt, but it also has enhanced handling characteristics and increased high temperature stability.

BriggsAmasco craftsmen have been applying Mastic Asphalt for generations and today use their traditional skills to also lay Hot Melt Monolithic Roofing and Waterproofing Systems.

Flat Roofing

Mastic Asphalt is highly suited as a flat roofing material where it is not excluded by weight considerations.

Roof Gardens – Extensive and Intensive

Mastic Asphalt is a suitable waterproofing membrane for all types of green roofs because of its long term performance and durability; important where subsequent access to the membrane will be difficult.

Car Parks

For parking, service decks and loading bays, Mastic Asphalt still provides the most durable and best performing waterproofing solution.
